Hi detfel, I can't change the license right now, but feel free to use the TSMBIOS project in your open source project. Let me know if you have any issue or doubts.

Best regards  
Rodrigo Ruz.

Hello,

first of all:  
Thank you for this wonderful unit !

I'm a maintainer of the open source client management project opsi  
(<http://opsi.org>)

One important part of the client-agent of opsi is written in Lazarus/Freepascal and I would like to integrate tsmbios.

The problem is, that our Software is released under AGPL v3 which is not compatible to the Mozilla Public License 1.1.

Is there any possibility to release tsmbios with MPL 2.0 which is compatible for the use with AGPL v3 ?

Or could you (as copyright holder) give us (the uib gmbh as maintainer of the opsi.org project) the permission to use tsmbios as library in our project ?

Thanks in advance
